Eur. J. Blochem. 254:685-691(1998).
-!- FUNCTION: MAY REGULATE BONE RESORPTION BY BLOCKING TERMINAL STAGES
OF OSTEOCLAST DIFFERENTIATION AND ALLOWING ACCUMULATION OF NEWLY
SYNTHESIZED BONE AND CARTILAGE. MAY INHIBIT IN VITRO
OSTEOCLASTOGENESIS BY INTERUPTING CELL-TO-CELL SIGNALING BETWEEN
STROMAL CELLS AND OSTEOCLAST PROGENITORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Suggs S., Boyle W.J.; "Osteoprotegerin: a novel secreted protein involved in the regulation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and dendritic-cell function.";

Nature 390.175-179(1997).
-!- FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS RANKL.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (POTENTIAL).
-!- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                               753

gene and its expression nembryogenesis.";

Gene 215:339-343(1998).

1- FUNCTION: MAY REGULATE BONE RESORPTION BY BLOCKING TERMINAL STAGES

1- FUNCTION: MAY REGULATE BONE RESORPTION BY BLOCKING TERMINAL STAGES

OF OSTEOCLAST DIFFERENTIATION AND ALLOWING ACCUMULATION OF NEWLY

SYNTHESIZED BONE AND CARTILAGE. MAY INHIBIT IN VITRO

OSTEOCLAST OSTEOCLAST PROGRITORS.

STROMAL CELLS AND OSTEOCLAST PROGRITORS.

1- SUBGLIULAR LOCATION: EXTRACELLULAR.

1- SUBGLIULAR LOCATION: EXTRACELLULAR.

1- TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN LIVER, LUNG,

PLACENTA. NOT DETECTED IN SPIESEN.

1- DEVELOPMENTAL STAGES: IN THE EMBRYO, HIGH LEVELS ARE DETECTED AT

1- DEVELOPMENTAL STAGES: IN THE EMBRYO, HIGH LEVELS ARE DETECTED AT

1- DEVELOPMENTAL STAGES: IN THE EMBRYO, HIGH LEVELS ARE DETECTED AT

1- DEVELOPMENTAL STAGES: IN THE EMBRYO, HIGH LEVELS ARE DETECTED AT

1- DAY 7. AT DAY 11, EXPRESSION DECREASES AND THEN INCREASES FROM DAY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Simonet W.S., Lacey D.L., Dunstan C.R., Kelley M., Chang M.-S., Luethy R., Nguyen H.Q., Wooden S., Bennett L., Boone T., Shimamoto G., Derose M., Elliott R., Colombero A., Tan H.-L., Trail G., Sullivan J., Davy E., Bucay N., Renshaw-Gegg L., Hughes T.M., Hill D., Pattison W., Campbell P., Sander S., Van G., Tarpley J., Derby P., Lee R., Sugs S., Boyle W.J.;

                                                        -!- SUBCELLULAR LOCATION: EXTRACELLULAR.
-!- TISSUE SPECIFICITY: EXPRESSED AT HIGHEST LEVELS IN LUNG, HEART,
KIDNEY, PLACENTA, THYROID, SPINAL CORD AND LIVER. ALSO DETECTED IN
A NUMBER OF OTHER HEMATOPOLISTIC AND IMMURE ORGANS. NOT DETECTED IN
THE PANCREAS OR PERIPHERAL BLOOD LYMPHOCYTES.
-!- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

**SUBCELLULAR LOCATION: EXTRACELLULAR.

**ISSUE SPECIFICITY: EXPRESSED AT HIGHEST LEVELS IN LUNG, HEART, KIDNEY, PLACENTA, THYROLD, SPINAL CORD AND LIVER. ALSO DETECTED A NUMBER OF OTHER HEMATOPOIETIC AND IMMUNE ORGANS. NOT DETECTED THE PANCHEAS OR PERIPHERAL BLOOD LYMPHOCYTES.

**IMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

SUBCELLULAR LOCATION: EXPRACELLULAR.
TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN LIVER, LUNG,
BRAIN, HEART, KIDNEY, STOMACH, INTESTINE, SKIN, CALVARIA AND
PLACENTA. NOT DETECTED IN SPLEEN.
DEVELOPMENTAL STAGE: IN THE EMBRYO, HIGH LEVELS ARE DETECTED AT
DAY 7. AT DAY 11, EXPRESSION DECREASES AND THEN INCREASES FROM DAY
15 TO DAY 17.
                                                                                                                                                                                                                                                                                                                                                                                                           71 DCMCVQP-----EFHCGDPCCTTC------RHHPCPPGQGVQSQGKFSF 108

-I- FUNCTION: MAY REGULATE BONE RESORPTION BY BLOCKING TERMINAL STAGES OF OSTEOCLAST DIFFERENTIATION AND ALLOWING ACCUMULATION OF NEWLY SYNTHESIZED BONE AND CARTILAGE. MAY INTERIPT IN VITRO OSTEOCLASTOGENESIS BY INTERIPTING CELL-TO-CELL SIGNALING BETWEEN STROMAL CELLS AND OSTEOCLAST PROGENITORS.

-I- SUBDINIT: HOMODIMER (MAJOR FORM) AND MONOMER (MINOR FORM) (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: EXTRACELLULAR.

-I- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
